DIGITAL CONTRAST SENSOR WITH METAL HOUSING

- *Wide-spectrum RGB LED emission*
- *3 different versions: basic, standard and enhanced*
- *Automatic, manual and dynamic setting*
- *15, 20 or 30 kHz switching frequency*
- *NPN/PNP and analogue outputs*
- *Standard fixing, M12 connector rotatable on 5 positions*

CONTRAST SENSORS

TL46 SERIES

The new digital contrast sensor line of the **TL46** series is characterised by excellent performances in terms of resolution, definition and precision of the light spot emitted by RGB LEDs, low response time and high switching speed. The sensor, developed in a sturdy metal housing with standard fixing, is available in 3 different versions able to better satisfy all applications offering avantgarde technology at the best price/performance ratio.

The **TL46-W** basic version has only one set push-button, 2 LEDs indicating respectively the output status and sensor acquisition condition. The performances and use ease have be optimised and offered at a competitive price.

The **TL46-WL** standard version has set 3 push-buttons, 4 LEDs signalling the output status, sensor acquisition condition, delay output activation and push-button activation. A bargraph is also available for manual setting of the threshold to detect particularly difficult contrasts. The standad version supplies excellent performances in general at a 20 kHz switching frequency.

The **TL46-WLF** enhanced version presents a 4-digit display for the setting of the most advanced functions, such as dynamic acquisition of the contast mark. The sensor reaches the maximum market performances at 30 kHz switching frequency.

Accessory lenses with 9 - 40 mm focal distance are available for all versions, as well as a high-resolution focussing lens and a PMMA plastic patent-covered lens particularly suitable to food applications with standard 9 mm focal distance.

value through detection

SETTING

The switching threshold is set pressing twice the SET push-button; the first for the mark the second for the background.

The threshold level can be set manually, in the TL46-WL/WLF version, pressing the '+' and '-' push-buttons which increase or reduce the threshold as visualised on the bargraph or display.
The dynamic setting, present in the TL46-WLF version, detects the moving mark by simply keeping the SET push-button pressed, or activating the Remote/Dyn input.

VERTICAL SPOT

HORIZONTAL SPOT

Horizontal spot is present in the TL46 models with final '-L' suffix

TECHNICAL NOTES

[1] *Limit values*

[2] *Average life of 100.000 h with T_A = +25 ºC*

[3] *Connettor block rotatable on 5 positions*

[4] *A - reverse polarity protection*
*B - overload and short-circuit protection*
