

S62...B

Polarised retroreflex

INSTRUCTION MANUAL

CONTROLS

OUTPUT LED (yellow)

The yellow LED ON indicates the following output status: N.O. closed and N.C. open.

STABILITY LED (green)

The green LED permanently ON indicates a stable operating condition, where the signal received has a safety margin higher than 30% respect to the output switching value. The sensor is ready to function correctly.

SENSITIVITY TRIMMER (ADJ.)

A mono-turn trimmer adjusts the sensitivity and the sensor operating distance.

See the "SETTING" paragraph for the functioning mode.

NOTE: the maximum trimmer mechanical rotating range is equal to 240°. Do not force over the maximum e minimum positions.

INSTALLATION

The sensor can be positioned by means of the three housing's holes using two screws (M4x25 or longer, 1.5 Nm maximum tightening torque) with washers.

Various orientable fixing brackets to ease the sensor positioning are available (please refer to the accessories listed in the catalogue).

The operating distance is measured from the front surface of the sensor optics.

The M12 connector can be oriented at two different positions using the specific fastening spring and rotating the block of 180°.

TECHNICAL DATA

Power supply:	10 ... 30 Vdc (limit values)
Ripple:	2 Vpp max.
Current consumption (output current excluded):	< 30 mA
Outputs:	PNP or NPN N.O. / N.C.; 30 Vdc max. (short-circuit protection)
Output current:	100 mA max (overload and overvoltage protection)
Output saturation voltage:	≤ 2 V
Response time:	500 μs max.
Switching frequency:	1 kHz
Indicators:	OUTPUT LED (YELLOW) / STABILITY LED (GREEN)
Setting:	mono-turn sensitivity adjustment trimmer
Operating temperature:	-10 ... 55 °C
Storage temperature:	-20 ... 70 °C
Dielectric strength:	500 Vac / 1 min. between electronic parts and housing
Insulation resistance:	>20 MΩ / 500 Vdc, between electronic parts and housing
Operating distance (typical values):	0.1...8 m su R2 (EG = 2)
Emission type:	RED (640 nm)
Ambient light rejection:	according to EN 60947-5-2
Vibrations:	0.5 mm amplitude, 10 ... 55 Hz frequency, for each axis (EN60068-2-6)
Shock resistance:	11 ms (30 G) 6 shocks for each axis (EN60068-2-27)
Housing material:	ABS
Lens material:	window in PMMA, lenses in polycarbonate
Mechanical protection:	IP67
Connections:	2 m Ø 4 mm cable / M12 4-pole connector
Weight:	90 g. max. (cable version) / 40 g. max. (connector version)

CONNECTIONS

SETTING

Alignment:

- Align sensor and reflector on opposite sides at the necessary distance.
- Rotate in the clockwise direction the sensitivity adjustment trimmer (ADJ.) to maximum level.
- Moving the sensor vertically and horizontally, establish the powering and turning off of the yellow LED (OUT) and fix the sensor at in the middle. The best alignment is obtained in the following condition: yellow LED permanently OFF and green LED permanently ON.

Control:

- Place the target between the sensor and the reflector. Control that the yellow LED turns ON.
- Remove the target and control that the yellow LED turns OFF again.

DIMENSIONS

CABLE VERSION

EX-II-3D T6
 Temperature class: T6 (<85°C)
 Max. Power consumpti 540 mW at 30 Vdc
 Max. Internal capacitor 100 nF
 Internal inductance: negligible

DECLARATION OF CONFORMITY

We DATASENSOR S.p.A. declare under our sole responsibility that these products are conform to the 2004/108 CEE, 73/23 CEE Directives and successive amendments.

WARRANTY

DATASENSOR S.p.A. warrants its products to be free from defects. DATASENSOR S.p.A. will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date. This warranty does not cover damage or liability deriving from the improper application of DATASENSOR products.

S62...M Background suppression

INSTRUCTION MANUAL

CONTROLS

OUTPUT LED (yellow)

The yellow LED ON indicates that the N.O. output is closed and the N.C. output is open.

STABILITY LED (green)

When permanently ON, the green LED indicates a normal operating condition where the received signal has a safety margin superior to 30% respect to the output switching value. The sensor is ready to function correctly (stability condition).

DISTANCE ADJUSTMENT TRIMMER (ADJ.)

A 6-turn trimmer allows the background suppression distance adjustment through a mechanical variation of the optic triangulation angle.

The operating distance increases, rotating the screws in a clockwise direction. Please refer to the "SETTING" paragraph for acquisition or setup procedure indications.

POSITION INDICATOR

This indicator presents a scale numbered from 1 to 6 that allows a precise adjustment of the suppression distance in the entire operating range. Please refer to the "SETTING" paragraph for use indications.

TIMER ADJUSTMENT TRIMMER (only M05/M15/M25/M35 vers.)

This control allows to vary the output delay deactivation from 0 to 1 sec. Please refer to "TIMER FUNCTIONS" paragraph for use indications.

INSTALLATION

The sensor can be positioned by means of the three housing's holes using two screws (M4x25 or longer, 1.5Nm max. tightening torque) with washers.

Various orientable fixing brackets to ease the sensor positioning are available (please refer to the general catalogue).

The operating distance is measured from the front surface of the sensor optics.

The M12 connector can be oriented at two different positions using the specific fastening spring and rotating the block of 180°.

Weight:	90 g. max. cable vers. / 40 g. max. connector vers.			

SETTING

Suppression distance setting

1. Object detection

Position object to detect in front of the sensor at the distance required. Turn distance adjustment trimmer (ADJ) to minimum: yellow LED OFF and green LED ON.

Rotate trimmer in a clockwise direction until the yellow LED and green LED turn ON. Object detection condition (A status of position indicator)

2. Background suppression

Remove object and ensure that the background is in front of the sensor: yellow LED OFF and green LED ON.

Rotate trimmer in a clockwise direction until the yellow LED and green LED turn ON: background detection condition (B status of position indicator).

The trimmer reaches maximum level with yellow LED OFF if the background is outside the operating range.

Rotate trimmer in an anticlockwise direction until yellow LED turns OFF and green LED ON: condition where background is outside operating range (C status of position indicator).

3. Setting and control

Rotate trimmer in an anticlockwise direction until the indicator reaches an intermediate point between position A and C.

If position A and C are close to each other, leave trimmer on position C. The sensor is now ready to function correctly and in stable conditions:

DIAGRAMMA DI RILEVAZIONE

DIMENSIONS

CABLE VERSION

TIMER FUNCTION (S62...M05/M15/M25)

The timer function allows to adjust the output deactivation delay when the object is outside the detection area. The delay extends the output activation allowing the slower interface systems to detect shorter pulses.

The delay adjustment is carried-out manually using the Timer adjustment trimmer. Clockwise rotation increase the delay from 0 to a max. 1 sec. value.

	EX-II-3-D T6	
	Temperature class:	T6 (<85°C)
	Max. Power consumption:	1260 mW at 30 Vdc
	Max. Internal capacitance:	130 nF
	Internal inductance:	negligible
